Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SwissProt\_40:\* Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Gen. Genet. 260:475-479(1998).

-!- FUNCTION: THIS PROTEIN BELONGS TO THE HISTONE LIKE FAMILY OF PROKARYOTIC DNA-BINDING PROTEINS WHICH ARE CAPABLE OF WRAPPING DNA TO STABILIZE IT, AND PREVENT ITS DENATURATION UNDER EXTREME ENVIRONMENTAL CONDITIONS (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE BACTERIAL HISTONE-LIKE PROTEIN FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acctate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatorid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune uveoretinits, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthemia gravis, psendiated diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated in the contact sensitivity diseases which can be treated to the contact sensitivity diseases which can be treated to the contact sensitivity contact sensitivity can be can be treated to the contact sensitivity can be contacted to th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY82571 to AAY82577 represent specifically claimed copolymer molecular
                                                                                                                                                                                                                                                        Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The colypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune complete which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, candemia, autoimmune opportitis, osteoarthritis, autoimmune haemolytic andemia, autoimmune opportitis, autoimmune thrombocytopaenia cuverrainis, contact sensitivity disease, diabetes mellitus, Graves purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves (Gisease, Guillain-Barres s syndrome, Hashimoto's disease, and myschemic gravis, psoriated diseases which can be treated include type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to all and an analogous to an analogous to an analogous to all and an analogous to all and an analogous to all and an analogous to an analogous to all and an analogous and an anal

Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ଚ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for and an amino acid composition are used as molecular weight markers for Jatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or tribody-mediated diseases. Such diseases include arthritic conditions, demyellinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic ansemia, autoimmune opportitis, autoimmune thyroiditis, autoimmune autoimmune autoimmune autoimmune thyroiditis, autoimmune aut
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ı,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Copolymer; molecular weight marker; TV-marker; immune disease; glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidabetic; immunosuppressive; antidaporiatic; dermatological; antidanaemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple solerosis; rheumatoid arthritis; crohn's disease; chronic immune thrombocytopania purpura; colitis; diabetes mellitus; Graves disease; Gulllain-Barre's syndrome; psoriasis;

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or artibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's disease, chomic immune thyroiditis, autoimmune thyroiditis, autoimmune purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            include host-versus-graft disease, graft-versus-host disease, and delayde-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Indels 31; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ----- KAKAAEAAK 29

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for golypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune classes which may be treated include either cell-mediated or rational diseases such inflammatory conditions, e.g. multiple antibody-mediated diseases. Such disease include arthritic conditions, canaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune baemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune uveoretinitis, crohu's disease, chronic immune thrombocytopaenia uveoretinitis, contact sensitivity disease, diabetes mellitus, Graves purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, myasthenia gravis, psyndrome, Hashimoto's disease, and indopathic myxoedema, myasthenia gravis, psyndrome, Hashimoto's disease, and colled host-versus-graff disease, graff-versus-sqraff disease, called host-versus-graff disease, diabetes which can be treated include host-versus-graff disease, properties which are analogous to called the molecular weights and physical properties which are analogous to called the manufacture and properties which are analogous to called the manufacture and properties which are analogous to a sense the mideated manufacture and properties we as a sense of the invention have 109 AA; Sequence

Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases

Claim 10; Page 14; 72pp; English

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight cf acopolymer (CP), which has an identified molecular weight cf acopolymer (CP), which has an identified molecular weight cand an amino acid composition corresponding to the copolymer. The colypeptides of the invention are used as molecular weight markers for glatinamer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune corresponding to the acopolymer and include either cell-mediated or antibody-mediated diseases and inflammatory conditions, e.g. multiple aclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune ophoritis, autoimmune thrombocytopaenia cuvecretinitis, contact sensitivity disease, diabetes mellitus, Graves Guesase, Guillain-Barre's syndrome, Hashimoto's disease, diabetes mellitus, craves comycodema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delined molecular weights and physical properties which are analogous to colline the manner acetate molecules, which makes them ideal for use as

The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for polypeptides of the invention are used as molecular weight markers for glatizamer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune attibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple artibody-mediated diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune harmolytic anaemia, autoimmune cophoritis, autoimmune thyroiditis, autoimmune vecetinitis, Crohn's disease, chronic immune thrombocytopaenia pravis, contact sensitivity disease, diabetes mellitus, Graves disease, duillain-Barre's syndrome, Hashimoto's disease, aliopathic myxoedema, myasthenia gravis, permoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-seriat disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to molecular weights molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Copolymer; molecular weight marker; TV-marker; immune disease; glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antiinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological; antidianemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis; Pashinoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                     Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:5.
                                                                                          AAY82575 standard; peptide; 77 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 10; Page 14; 72pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (YEDA ) YEDA RES & DEV CO LTD. The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the C. albicans proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Yeast and fungal nucleic acids encoding proteins involved in a pathway leading to programmed cell death, useful for treating proliferative disorders, yeast and fungal infections, or for preventing apoptosis in

The present sequence represents a synthetic peptide which has a high affinity for glycoaminoglycans and proteoglycans. The peptide is useful in methods for modulating heparin or other glycoaminoglycans with anticoagulant activity, promoting cell attachment or adhesion to natural or synthetic surfaces (especially vein grafts), modulating curfunds differentiation, targeting drugs to epithelial cell surfaces (or to other cells expressing proteoglycans), modulating enzymes that act on glycoaminoglycan grafting proteoglycans, modulating enzymes that act on glycoaminoglycan atti-coagulant functions mediated through glycoaminoglycans, and anti-coagulant functions mediated through glycoaminoglycans, and tissue uptake of heparin or other glycoaminoglycans, and tissue uptake of heparin or other glycoaminoglycans in a mammal to increase heparin half-life in circulation.
                                                                                                                                                                                                                                                                                                                            Novel synthetic peptides with high affinity for glycoaminoglycans and proteoglycans, useful for modulating heparin, promoting cell attachment, modulating tumour metastasis and modulating wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             copolymer 1; COP-1-19; myelin basic protein; MBP; 1 activity; autoimmune encephalomyelitis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1.77 were subcloned from PREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US461009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences. the COP-1 polypeptide may be cleaved from the fusion protein. the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1.77 contains oligonuclectide duplexes incoding the following segments: YKK, EAB, KAK, AAK, and AAA. The N-terminal alanine residue is left behind following CABL and an and an anticonsimants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control a demyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             3
                                                                                                                                                                                                                                                                        coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-19 contains oligonucleocited duplexes incoding the following segments: YKK, AAE, KAK, EKA, KKA, YEA, AKA KEA, and AAA. The herminal alanine residue is left behind following CNBr cleavage of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control ademyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in certain amino acids.

AAM259166 to AAH99904 encode the human proteins given in AAM25225 to
AAM25933. The proteins can have activities based on the tissues and
cells they are expressed in, such as: antinifammatory; antipheumatic,
antiarthritc; immunosuppressive; antibacterial; endocrine; cardiant;
cardiovascular; antianaemic; antiageregant; haemostatic; vulnarary;
cardiovascular; antianaemic; antiageregant; haemostatic; vulnarary;
cardiovascular; antianaemic; antiageregant; nactiallergic; antiasthmatic;
antidleer; osteopathic; dermatological; antiallergic; antidathmatic;
antidlear; osteopathic; dermatological; antiallergic; antidated antidiapetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidiapetic; cytostatic; neuroprotectides are useful for screening for groduction, The proteins and polynucleotides are useful for screening for agondates associated with the activity of a protein e.g. inflammation, rheumatoid arthritis, septic shock, pancreatitis, cardiac dysfunction, neuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis; severe combined infections, autoimmunity, cancer, multiple sclerosis, depression, contended antimunodeficiency, eczena, allergic
antimularia, asthma, diabetes, cancer, multiple sclerosis, depression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ξ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher everaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA
                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                        New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1;
                                                                                                                                                                                                                                                                         The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the Buropean Patent Office.
                                                                                                                                                                              Novel polynuclectides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene

us-09-816-989a-1.open.rag

Novel peptides are claimed which contain 20-40 amino acids and which have a total cationic charge of less than +21 (pref. +16 to +18; esp. +18) as determined by the number of positively charged amino acids in the sequence. Preferably the positive charges are grouped amino acids amono acids having blocks of 2-4 positively charged amino acids amino acids having blocks of 2-6 neutral acids. Alternatively the positive charge may be distributed evenly or randomly along the peptide sequence. In particular the peptides are analogues of the protains (total cationic charge = +21) in which selected arginine residues have been replaced with uncharged amino acids and other arginine residues have been replaced by other positively charged amino acids and other arginine residues have been replaced by other positively charged amino acid residues, the fearbly lysine. The peptides reverse the effect of low mol. Wt. heparin (LMMH) anticoagulation and hence can be used medically to prevent bleeding are less toxic than n-protamine since the reduced positive charge gives an improved efficiency to toxicity ratio; and they may be more effective than n-protamine in their anti-LMMH action.

The present sequence (total cationic charge = +18) is a specific example of the new polypeptides. 32 AA; Sequence XCCCCCCCCCCCCCCCCCCCCCCCC

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 16, Application US/08303025
Patent No. 5614494
GENERAL INFORMATION:
APPLICANT: Wakefield, Thomas W.
APPLICANT: Andrews, Philip C.
APPLICANT: Stanley, James C.
TITLE OF INVENTION: LOW MOLECULAR WEIGHT HEPARIN AND TITLE OF INVENTION: ANTICOAGULATION REVERSAL
                                                                                               APPLICANT: Wakefield, Thomas W.
